**GREYLOCK ENERGY ANNOUNCES PROMOTION:**

**Charleston-Based Energy Company Promotes Chandler to Vice President of  
Midstream**

Charleston, W.Va. – Officials with Greylock Energy today announced a strategic promotion within their leadership team.

According to Greylock COO Ryan Deaderick, Joey Chandler has been promoted to vice president of midstream. In this role, he will oversee operations of major midstream infrastructure; well pad facility, pipeline and compression design and construction; managing company-wide connected electronic measurement; high-level technical support for the company's gas measurement, regulation and processing; PHMSA regulatory compliance; and support third-party midstream development opportunities.

Prior to this promotion, Deaderick said Chandler served as director of midstream engineering and construction for Greylock where he focused on expanding the company's midstream business to include engineering, constructing, and managing many of its most complicated surface and infrastructure assets. "Joey knows the midstream business and

operations – inside and out and he has grown this business over the last 15 years into the significant segment it is today.” Deaderick continued, “Joey has helped launch our third-party midstream business, which provides producers distinctive flexibility and service. We understand the complex challenges that accompany natural gas production, transportation, and usage. Our expertise has been honed over decades in the energy industry where we have been instrumental in connecting hundreds of natural gas end users with the energy resources and feedstocks they need. And in this position, I am confident Joey will take this segment of our business even further.”

Greylock Energy is headquartered in Charleston, W.Va. with offices scattered throughout West Virginia and Pennsylvania and operations across the nation. The vast majority of the company’s assets are located in the Appalachian Basin, which comprises more than 1.19 million acres, about 6,700 wells, and 2,600 miles of pipeline. Greylock’s leadership is an experienced team with decades in the energy industry and possessing a wealth of knowledge and unmatched expertise relating to operations, particularly in the eastern United States.
